Children's Pollinator Gardens

The Dragonfly

- There are 140 species of Dragonfly in Southern MN, approximately 7,000 worldwide.
- Dragonflies can travel up to 35 mph.
- Dragonfly can "eat on the fly" chewing up mosquitos and other flying insects in their powerful mandibles while in flight.
- Dragonflies live at least one or two years underwater as larvae and are adults on the wing for maybe only six weeks.

Children's Pollinator Gardens

- There are 455 species of bees in Minnesota.
- Bees can live from two weeks to six years depending on the type of bee.
- The largest bee in Minnesota is the black-and-gold bumble bee.
- The rusty patched bumble bee has been listed as federally endangered since 2017.
- In the winter when temperatures drop below 50 °F (10 °C), honeybees retreat to their hives and form a winter cluster to keep warm.

Children's Pollinator Gardens

- There are about 146 species of butterflies in Minnesota and approximately 20,000 butterfly species worldwide.
- Monarch butterfly live throughout Minnesota during the summer. Its large size, range, and color make it one of Minnesota's most well-known insects.
- Butterflies are valuable pollinators -- responsible for one in every three bites of food we consume and contribute over \$200 billion to the food economy worldwide.

Children's Pollinator Gardens

The Gardens

The Butterfly, completed in 2015

The Dragonfly, completed in 2017

The Bee, completed in 2019

These gardens were designed by Judy Code, enhanced by Computer Aided Design and built by Bill Quinnell and his landscape crew.

These gardens are found no where else on earth, but two of them are on Google Earth.

Funding was provided by: Northfield in Bloom, Northfield Shares, the Northfield Garden Club and the City of Northfield. Our community depends on these three pollinators for our food and they have been endangered.

These gardens are maintained each year by the Northfield Garden Club.
